For large-scale, containerized ESS (e.g., 100 kWh and above), costs can drop to \$180 to \$320 per kWh, depending on system size, integration, and local market conditions. These numbers are affected by: Regional labor and material costs Local grid policies or incentives Project scale and technical.

In 2025, the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region.
