If you're planning a utility-scale battery storage installation, you've probably asked: What exactly drives the \$1.2 million to \$2.5 million price tag for a 10MW system in 2024?

Let's cut through industry jargon with real-world cost breakdowns and actionable insights. Recent data from BloombergNEF.

The cost of a battery energy storage system depends on its size, type, and capacity. Below is a general breakdown: Lithium-Ion Batteries: \$10,000–\$20,000 (including installation). Lead-Acid Batteries: \$5,000–\$10,000 (cheaper but less efficient). Lithium-Ion Batteries: \$50,000–\$200,000 or more.

The 2024 ATB represents cost and performance for battery storage with durations of 2, 4, 6, 8, and 10 hours. It represents lithium-ion batteries (LIBs)—primarily those with nickel manganese cobalt (NMC) and lithium iron phosphate (LFP) chemistries—only at this time, with LFP becoming the primary.

As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing BESS Prices.

The cost of a 10 MWh (megawatthour) battery storage system is significantly higher than that of a 1 MW lithiumion battery due to the increased energy storage capacity. 1. Cell Cost As the energy storage capacity increases, the number of battery cells required also increases proportionally. Assuming. What are base year costs for utility-scale battery energy storage systems?

Base year costs for utility-scale battery energy storage systems (BESSs) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2023). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.
