Provides statistical tables and publications grouped into various CSA (Classification of Statistical Activities) subjects v1.1. Apart from that, the tables provided also include tables in Indonesian Statistics publications. Energy - energy supply, energy use, energy balances, security of supply.

The Indonesia Energy Storage Market accounted for \$XX Billion in 2023 and is anticipated to reach \$XX Billion by 2030, registering a CAGR of XX% from 2024 to 2030. A 5MW battery energy storage system (BESS) pilot project has been launched by Indonesia's state-owned utility and battery manufacturer.

rocketed in 2022, the subsidy amount increased dramatically. Originally, the subsidy budget was IDR 350 billion or USD 24 billion. However, by the end of 2022, the subsidy had reached its peak with electricity subsidies and compensation totaling IDR 551 trillion or USD 37 billion. The electricity.

The updated Handbook of Energy & Economy Statistics of Indonesia represents the continued efforts of the Center for Data and Information Technology on Energy and Mineral Resources (CDI-EMR) to provide accurate and reliable data on Indonesia's energy and economic sectors in a unified publication.

Indonesia's focus on industrial growth creates a demand for reliable power. BESS can offer backup power, improve power quality, and enable cost savings through peak shaving. The Indonesian government recognizes the importance of energy storage.

Why is battery energy storage system important in Indonesia?

However, given the challenge of Indonesia's geological landscape, with many off-grid and remote areas, there is growing intermittency issue that hamper the development of solar and wind generation. Hence, the battery energy storage system (BESS) technologies have a critical role in the development of Indonesia's renewable energy.

How are Indonesia's Energy and economic statistics consolidated?

Data shown in the tables of Indonesia's energy and economic statistics are consolidated from various statistics of regular publication. The data are harmonized in format and definition as well as cover an estimate of energy demand calculated by using the macro-economic approach.

Why are energy and economic data a problem in Indonesia?

Energy and economic data in Indonesia are often scattered across multiple sources, stored in various formats, and not readily accessible for comprehensive energy analysis. Furthermore, such data typically lack sufficient explanation and standardization, creating challenges for researchers and policymakers.

What will Indonesia's energy supply look like in 2024?

In line with the growth of the Indonesian economy, Indonesia's energy supply in 2024 will also increase by 7.3% from the previous year with a value of 2,007 million BOE or the highest in the last ten years.

What are some potential energy storage projects in ASEAN?

Other potential energy storage projects are the Cirata projects—the largest floating solar planned for ASEAN at 145 MW in Purwakarta region, West Java and eastern parts of Indonesia such as 2x50 MW in Bali and 70MW in the new capital, the city of Nusantara, East Kalimantan.
