

## Average factory solar storage price per 300MW in Saudi Arabia

## Overview

Could a power purchase agreement make large-scale solar projects viable in Saudi Arabia?

Saudi scientists have determined the current price threshold for power purchase agreements (PPA) that could make large-scale PV and wind power projects viable in Saudi Arabia. They incorporated data from the 300 MW Sakaka solar farm and four potential utility-scale PV project sites.

How much does a solar PV plant cost?

“The Sakaka solar PV plant operates under a 25-year PPA with an electricity price of \$23.40/MWh, while the Dumat Al Jandal wind farm has a 20-year PPA with an electricity price of \$21.30/MWh,” the researchers said, acknowledging that technical and financial details for the plants are not fully available.

What will be the future of solar power in KSA?

Another initiative is the plan to run AIUla on 100% renewables from a solar PV plant and battery farm (1 GW of installed capacity) by 2035. Finally, demand in NEOM in northwest KSA is expected to reach 6 GW of solar power by 2030.

Do tariffs make solar projects economically unviable?

They incorporated data from the 300 MW Sakaka solar farm and four potential utility-scale PV project sites. Researchers at King Abdulaziz University have conducted a techno-economic analysis for utility-scale wind and solar plants in Saudi Arabia and have found that current tariffs make projects economically unviable.

What is SGI doing with solar power in Saudi Arabia?

An initiative under the SGI umbrella is the Saudi Telecom Company (STC) Solar Pilot Project, which aims to install solar power capacity across STC infrastructure by 2024. Another initiative is the plan to run AIUla on 100% renewables from a solar PV plant and battery farm (1 GW of installed capacity)

by 2035.

How much NPV should a solar project cost?

They said that to achieve zero NPV values, the other identified sites for solar deployment should host projects requiring PPA prices ranging from \$26.10/MWh to \$29.30/MWh.
