Recent industry analysis reveals that lithium-ion battery storage systems now average €300-400 per kilowatt-hour installed, with projections indicating a further 40% cost reduction by 2030.

Divining into the specifics, the cost per kWh is calculated by taking the total costs of the battery system (equipment, installation, operation, and maintenance) and dividing it by the total amount of electrical energy it can deliver over its lifetime. It's more complex than the upfront capital.

In 2023, the average VFB system cost ranged between \$400-\$800 per kWh for commercial installations – a figure that masks both challenges and opportunities. Vanadium electrolyte constitutes 30-40% of total system costs. Unlike lithium-ion batteries where active materials degrade, VFB electrolytes.
