Overview

There are several types of PV inverters, and some basic information about them will help you identify the most suitable kind of inverter for your household.

The string inverter is the most common type of photovoltaic inverter, the simplest and the cheapest. Solar panel string (or strings) will be connected to a single inverter. The inverter will.

Instead of using a single inverter for an entire system, each panel has its own micro-inverter. Usually the panels and micro-inverters are.

If you already have a solar system and are happy with your current inverter but want to add a storage battery instead of switching to a hybrid model, you can connect your battery through a battery inverter. This type of inverter can convert stored energy into.

Hybrid inverters are string inverters that can connect a storage battery to the solar PV system so the system will still work in the event of a voltage drop. Thus, a single unit will connect the panels.
