Driven by a mix of hydropower heritage, smart regulation, and growing interest in wind and solar, the Norwegian energy sector offers a glimpse into what a green, flexible, and market-driven electricity system can look like. ☐☐ 100% Renewable?

Almost There! Norway is a renewable energy.

For example, the 2024 average household price (including grid and taxes, excluding one-time support) was about 134.9 øre/kWh. This breaks down as roughly 59.9 øre/kWh actual electricity energy cost, 36.0 øre/kWh for grid rent (transmission + distribution), and 39.0 øre/kWh in taxes.

Small-scale lithium-ion residential battery systems in the German market suggest that between 2014 and 2020, battery energy storage systems (BESS) prices fell by 71%, to USD 776/kWh. With their rapid cost declines, the role of BESS for stationary and transport applications is gaining prominence.

Current energy storage stud prices in Oslo range from €800/kWh for residential systems to €450/kWh for utility-scale projects. But wait – these

numbers tell half the story. Hidden factors include: A recent thermal storage project at Oslo Airport demonstrates this perfectly. By using volcanic rock. How much will Norwegian hydropower cost in 2040?

Monte Carlo simulations suggest an average Norwegian power price of 39 ± 4 €/MWh in 2040, and unlikely to slip below 23 €/MWh or exceed 50 €/MWh in normal weather years. Our results show that regulated hydropower will have a substantially higher market value than the average power price (value factor of 1.3–1.4).

What is the market value of Norwegian hydropower?

The market value of Norwegian hydropower is driven by the same parameters as the average Norwegian electricity prices, which is unsurprising since hydropower represents approximately 75% of the total Norwegian electricity production. The average market value for onshore wind in Norway is 32 ± 4 €/MWh, corresponding to a value factor of 0.80.

How much electricity does Norway produce in 2021?

In 2021, Norway had an electricity production of 157 TWh, of which 91% was from hydropower, 8% from onshore wind, and <1% from thermal sources (NVE, 2021b). This shows that the Norwegian generation mix is already dominated by renewable energy. In normal weather years, Norway exports around 19 TWh of electricity to neighbouring countries.

Is solar PV a good option for the future Norwegian power market?

Solar PV has an average market value as low as 20 ± 3 €/MWh. Despite low LCOE estimates, solar PV does not look like an attractive option for the future Norwegian power market, given our model assumptions.

Will fossil fuel costs affect electricity prices in Norway in 2040?

Electricity prices remain strongly affected by fossil fuel costs to 2040. The 2040 power price in Norway is modelled to be 39 ± 4 €/MWh. Market value of Norwegian hydropower is 34% higher than the average power price. Seasonal patterns for solar PV give <3% probability of revenues higher than the LCOE.

How do carbon prices affect electricity prices in Norway?

Increased carbon prices cause an increase in the cost of importing electricity, as well as increased export of flexible Norwegian hydropower. This increases

the value of transmission lines, but it also increases the Norwegian power prices. 3.2.4.
