For example, industrial companies that purchase 7.5 million kWh of electricity (data for which can be found on the Elcom website) currently pay a median of 6.75 cents per kWh, compared to just 4.38 cents in 2015. This is a 50 percent increase, driven partly by the introduction of a winter.

Since the Alps cover almost two-thirds of Switzerland's landmass and provide numerous large mountain lakes and artificial reservoirs that are suitable for hydro power, the country's electricity sector primarily depends on hydroelectricity. Solar power is best used during daylight hours, when demand.

Small-scale lithium-ion residential battery systems in the German market suggest that between 2014 and 2020, battery energy storage systems (BESS) prices fell by 71%, to USD 776/kWh. With their rapid cost declines, the role of BESS for stationary and transport applications is gaining prominence. Why are energy prices important in Switzerland?
