How much does a lithium ion battery cost?

On average, the cost of lithium-ion battery cells can range from \$0.3 to \$0.5 per watt-hour. For a 2MW (2,000 kilowatts) battery storage system, if we assume an average battery cell cost of \$0.4 per watt-hour, the cost of the battery alone would be  $2,000,000 * \$0.4 = \$800,000$ .

How much does a 2MW battery storage system cost?

In total, the cost of a 2MW battery storage system can range from approximately \$1 million to \$1.5 million or more, depending on the factors mentioned above. It is important to note that these are only rough estimates, and the actual cost can vary depending on the specific requirements and characteristics of each project.

What are the different types of solar batteries?

There are two major types of solar batteries: lithium-ion and lead-acid. Out of these two options, lithium-ion batteries are considered ideal for a solar battery storage system. The most popular for energy storage, lithium-ion batteries have the longest lifespan. These batteries are also quite compact and light compared to other battery types.

How much does a battery storage system cost?

The cost of the BMS can account for about 5% to 10% of the total battery storage system cost. For a 2MW system, if we assume a BMS cost ratio of 8%, and the total system cost excluding the BMS is \$800,000 (as calculated for the battery cost above), then the cost of the BMS would be  $\$800,000 * 0.08 = \$64,000$ .
