Overview

The cost of an electric vehicle (EV) battery pack can vary depending on composition and chemistry. In this graphic, we use data from Benchmark Minerals Intelligence to showcase the different costs of battery cells on popular electric vehicles.

The cost of an electric vehicle (EV) battery pack can vary depending on composition and chemistry. In this graphic, we use data from Benchmark Minerals Intelligence to showcase the different costs of battery cells on popular electric vehicles.

Lithium nickel cobalt aluminum oxide (NCA) battery cells have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) has a slightly lower price point at \$112.7 per kWh. Both contain significant nickel proportions, increasing the battery's energy.

The per kWh price of NCM811 cell is currently the lowest in Greater China due to the low cost of battery materials, thanks to high localization, and the price difference in the manufacturing cost of these cells compared to Europe and North America. However, S&P Global Mobility forecasts a more than.

For instance, the article highlights that lithium nickel cobalt aluminum oxide (NCA) batteries have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) comes in slightly cheaper at \$112.7 per kWh. These batteries, rich in nickel, offer impressive.

Figure 1 presents the estimated cost for nickel manganese cobalt (NCM) 811 cells for a 10 gigawatt-hour per year production rate across four different countries. Figure 1 In the first quarter of 2023, NCM 811 cell costs in China were estimated to be 101 dollars per kilowatt hour (kWh) and 110.

NMC refers to NMC111 with equal shares of nickel, manganese, and cobalt. In order to assess the impact of raw material price changes on product prices, it is important to understand the raw material composition of electricity storage technologies. Figure 2 illustrates this for lithium-ion battery.

Battery raw material prices, news and market analysis. Get the latest on lithium, cobalt, nickel and more from our team of battery raw materials experts. How much does a lithium nickel cobalt battery cost?

Lithium nickel cobalt aluminum oxide (NCA) battery cells have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) has a slightly lower price point at \$112.7 per kWh. Both contain significant nickel proportions, increasing the battery's energy density and allowing for longer range.

How much does nmc111 battery cost?

NMC111 with equal shares of nickel, manganese and cobalt assumed here. Battery pack price of 130 USD/kWh assumed. Values in brackets show baseline raw material cost assumptions based on monthly average prices from 2010-2020.

How much does a battery pack cost?

Fig. 6 shows a combination of factors that can lead to the targeted battery pack cost to vehicle manufacturer. The price of the starting material is NMC333 is \$25.34 per kg (10% profit added to the cost of the product, \$23.04 per kg). Switching the cathode material composition from NMC333 to NMC532 reduces the price by \$1.79.

What is the difference between LFP and NMC battery pack prices?

LFP battery pack prices are most sensitive to copper, aluminium and lithium hydroxide cost. A quadrupling of all three would increase pack prices by ~35%. In contrast, NMC battery pack prices are most sensitive to the cathode materials, nickel and cobalt. A quadrupling of the cost for both would increase NMC battery pack prices by more than 50%.

Why are nickel-metal hydride batteries expensive?

Nickel-metal hydride batteries exhibit relatively high raw material cost due to large amounts of nickel. These batteries are also subject to commodity price fluctuations of nickel, leading to pack cost of 250 USD/kWh in the worst case.

Does raw material cost affect lithium-ion battery pack prices?

The analysis shows that each material only contributes a minor share to total raw material cost. In addition, total raw materials cost only constitute a share

of total product price. The cost increase of one raw material will therefore only have a limited impact on lithium-ion battery pack prices.
