Cobalt sulphate prices duly responded, jumping more than 60% in March to average \$5,767 a tonne, and holding onto most of those gains in April. Cobalt byproduct output is also increasing in Indonesia as its nickel shipments ballooned and the DRC is now in talks with the Asian nation to collaborate.

The per kWh price of NCM811 cell is currently the lowest in Greater China due to the low cost of battery materials, thanks to high localization, and the price difference in the manufacturing cost of these cells compared to Europe and North America. However, S&P Global Mobility forecasts a more than.

The latest data based on EV registrations in over 110 countries show the sales weighted average monthly dollar value of the lithium, nickel, cobalt, manganese and graphite contained in the batteries of the average EV based on global end-user registrations, battery capacity and chemistries. Put it.

Asian nickel cobalt manganese (NCM) battery cell prices fell to their lowest level for the first time in over three years in May, retreating significantly from the peak seen in 2022. A combination of lower critical battery raw material prices, supply glut, a sluggish demand and improving technology.

Lithium nickel cobalt aluminum oxide (NCA) battery cells have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) has a slightly lower price point at \$112.7 per kWh. Both contain significant nickel proportions, increasing the battery's energy.
