Cobalt sulphate prices duly responded, jumping more than 60% in March to average \$5,767 a tonne, and holding onto most of those gains in April. Cobalt byproduct output is also increasing in Indonesia as its nickel shipments ballooned and the DRC is now in talks with the Asian nation to collaborate.

The latest data based on EV registrations in over 110 countries show the sales weighted average monthly dollar value of the lithium, nickel, cobalt, manganese and graphite contained in the batteries of the average EV based on global end-user registrations, battery capacity and chemistries. Put it.

Asian nickel cobalt manganese (NCM) battery cell prices fell to their lowest level for the first time in over three years in May, retreating significantly from the peak seen in 2022. A combination of lower critical battery raw material prices, supply glut, a sluggish demand and improving technology.

As natural and synthetic graphite, lithium carbonate and hydroxide, and nickel, cobalt and manganese sulphate prices decline further, the raw materials bill for the average EV is now down to \$510 compared to \$918 in October 2023 and a monthly peak of more than \$1,900 at the beginning of last year.
