Average utility scale ESS price per 1MW in Iraq

Overview

How much electricity does Iraq use per capita?

Electricity consumption per capita was 1 190 kWh in 2022. It remains much lower than in neighbouring countries (1 900 kWh in Jordan and 3 300 kWh in Turkey). In 2013, Iraq published its Integrated National Energy Strategy (INES) until 2030, which could represent US$620 bn in investments in the energy sector.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity.So, while the system might be $200,000 per MW, the effective cost can be $800,000 per MWh if it has four hours duration.

What is the main energy source in Iraq?

Oil is the country's main energy source, accounting for two thirds of total energy consumption. By 2027, the country plans to double its oil production to 8 mb/d and expand its export capacity by 50%. Saudi Arabia and Iraq will build a 1 GW transmission line by 2023-2024. Iraq's economy is mainly based on the oil industry.

What is Iraq's Integrated National Energy Strategy?

In 2013, Iraq published its Integrated National Energy Strategy (INES) until 2030, which could represent US$620 bn in investments in the energy sector. Beside infrastructure development, the strategy noted the need for institutional reforms to foster private participation in the energy sector.

How much does Bess cost?

The cost of BESS has fallen significantly over the past decade, with more precipitous drops in recent years: This is nearly a 70% reduction in three

years, owing to falling battery pack prices (now as low as $60-70/kWh in China), increased deployment, and improved efficiency.
