To arrive at a more realistic estimate of which electricity generation technologies would most benefit Nigerian society today as well as in the future, a truer and more.

This study offers a mid-term perspective by providing an estimate of what today's costs to investor and society would translate into in the mid-term. The forecast is.

As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing BESS Prices
How much does an ESS system cost?

Increased competition in the commercial ESS space Government incentives (e.g., tax credits in the U.S. and Europe) make systems more affordable. For example, in 2022, a 100 kWh system could cost \$45,000. By 2025, similar systems could sell for less than \$30,000, depending on configuration.
