How much does electricity cost in Europe?

Residential prices increased by 23% to €2.38/kWh. Previously, prices had been generally decreasing between 2013 and 2021, except for in 2019 when they increased by 30% for industry and 10% for households. Total consumption per capita is around 1.8 toe (2023) (of which, around 3 300 kWh of electricity) compared to about 2.8 toe for the EU.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

How much electricity does Europe use per capita?

Total consumption per capita is around 1.8 toe (2023) (of which, around 3 300 kWh of electricity) compared to about 2.8 toe for the EU. The country aims at becoming a gas hub linking European demand centres with Russia and the large producers of the Caspian Sea. It is also diversifying towards LNG to reduce its dependence on Russian gas.

How much does a Bess battery cost?

Factoring in these costs from the beginning ensures there are no unexpected expenses when the battery reaches the end of its useful life. To better understand BESS costs, it's useful to look at the cost per kilowatt-hour (kWh) stored. As of recent data, the average cost of a BESS is approximately \$400-\$600 per kWh. Here's a simple breakdown:
