

## Citizen movement power storage time

## Overview

---

Here, the secondary battery allows the power reserve to store the energy and always keeps the watch charging. This stored energy helps run the watch for up to 6 months before it needs to be recharged, no matter if it was in total darkness.

Here, the secondary battery allows the power reserve to store the energy and always keeps the watch charging. This stored energy helps run the watch for up to 6 months before it needs to be recharged, no matter if it was in total darkness.

Let's be honest – how many times have you panicked when your smartwatch died mid-workout?

Enter the Citizen 9100 movement energy storage technology, quietly revolutionizing how wearables keep ticking. Unlike traditional batteries that need daily charging, this innovation harnesses your everyday.

Mechanical watches store their power in a spring, which unwound to provide the movement you see in the watch. Automatic means the watch can store power in the spring with wrist movement, so you don't need to hand-wound it. But if you just started using it, you can hand-wound it by turning the crown.

I have a mid 2000s B023 movement which I've been charging under a white lightbulb for around a week straight now. It works perfect under the bulb, ticking once every 20 seconds. However it switches to low battery indication (ticking thrice at the end of every minute) within a couple hours of being.

The Eco-Drive technology takes in light, converts it into electrical energy, and stores it in a power cell. Obviously, clear and sunny days will charge it up best. However, cloudy days, dim light, or exposure to artificial light also work. This energy then drives the gears, hands, and motor. By the.

This item fits the following Citizen Watch movement (s): E210, E260, E270, E600, E610, E650, E660, E670, G900, J250, J280, J290, U100, U101, U106, U107 This item fits the following Citizen Watch movement (s): E210, E260,

E270, E600, E610, E650, E660, E670, G900, J250, J280, J290, U100, U101, U106.

The problem: The power reserve stays below the half and does not move anymore. It is true that during the last month there was almost no sun (parts of Belgium) but the watch is since 3 weeks at the window and the power reserve does not move at all remaining the whole time below half charged. The.
