

Cosco energy storage container

engaging in shipment of energy, including oil and natural gas, operating under China COSCO SHIPPING Corporation Limited, a merged entity from the energy transportation arms of China Ocean Shipping Company and China Shipping. Who is COSCO Shipping energy?

Established in Shanghai on June 6, 2016, the Company is committed to becoming a whole-process energy transportation solution provider, providing customers with all-type, all-location and all-rounded energy shipping services. COSCO SHIPPING Energy focuses on two core businesses, oil shipping and LNG transportation.

Is COSCO Shipping launching an electric container ship in 2023?

On July 26 2023, COSCO Shipping launched a 700TEU electric container vessel at COSCO Shipping's No.1 Heavy Industry Shipyard at Yangzhou. The 120 meter long ship has a fully electric drive with 1,800 [kW] of total installed power.

How many batteries does a COSCO Container ship use?

Speaking of batteries, the electric container ship is powered by a large-capacity battery combining for over 50,000 kWh. However, COSCO says the number of battery modules can be configured depending on the length of the voyage at sea.

Will COSCO build an electric container ship on the Yangtze River?

According to Cosco, the project on the Yangtze River will serve as a model for future environmentally friendly shipping projects. The company had already started building a second electric container ship in May last year. interestingengineering.com, marineinsight.com.

What does COSCO stand for?

China Ocean Shipping (Group) Company, or COSCO for short, is a state-owned multinational conglomerate headquartered in Shanghai specializing in marine transport. Not to be confused with Costco, COSCO Shipping was founded as a subsidiary in 2016 following an approved merger between COSCO and China Shipping.

How can a container ship save energy?

This is possible because the batteries are housed in containers that can either

be charged in the harbour or exchanged by crane. With the battery-electric drive, the container ship is expected to save 3,900 kilograms of fuel per 100 nautical miles (185.2 kilometres) and reduce CO2 emissions by 12.4 tonnes.
