

Eei household energy storage

Overview

What is Edo energy storage system?

EDO IS THE NEW EEI HYBRID STORAGE SYSTEM DESIGNED FOR THE NEEDS OF MODERN HOUSES. The EDO system includes all the components needed to transform the energy produced by photovoltaic panels into usable energy for household consumption or to store it in the integrated battery and use it in the moment of real need.

Who is EEI?

Leader in the world power electronics market for over 40 years, EEI has developed consolidated experience in the production of inverters and power supplies in various sectors: renewable energy, heavy manufacturing industry, scientific research and clinical applications for cancer treatment.

What is the current status of EIA data?

EIA has resumed its regular data publication schedule, but intermittent disruptions to data availability via dashboards, tools, and data browsers on our website will continue as we complete planned system upgrades. Data availability issues may affect your access to data. In the meantime, explore the new Beta version with expanded plant level data for water cooling and emissions.

Where can I find building energy models?

The building energy models are available at data.openei.org. See the building energy models README.md file for details. The large number of building energy models used by ResStock and ComStock to represent the building stock makes it impractical for most organizations to run the full set themselves.
