Heat shrink tubing is a high-tech, low-cost solution that can be used in place of taping, molding, potting, gluing and glass. Tubing has a quicker application time and can help improve performance. Potting, for example, because it involves liquid resin, can be tougher to keep consistent and.

Similarly, proper investment in heat shrink tubing and components to fortify any electrical infrastructure can help to reduce the total cost of ownership

through improved lifecycle cost savings, reduced maintenance needs and lower failure rates. This is especially important for components installed.
