

Energy storage field salary survey questionnaire

Overview

Should you use Mercer's energy industry salary survey?

Mercer further insists that this survey not be used to facilitate improper exchanges or agreements among competitors. Use the robust data within this energy industry salary survey to ensure your organization's compensation strategy remains competitive across the energy sector.

What is an energy survey?

This is a key activity for an energy survey, identifying opportunities to replace or modify plant and equipment to be more energy efficient. During a survey examples of poor or bad practice will be found. These need to be evaluated and addressed. Spot and rectify waste energy occurrences through on-going Metering, Monitoring and Targeting (MM&T).

Why do you need energy industry salary data?

From smart meters and sensor devices to new tools to forecast natural gas supply and demand strategies, you need skilled professionals to advance strategic initiatives for your customers and communities. Having energy industry salary data is essential to making compensation decisions with confidence and securing the employees you need.

What makes an effective energy survey?

An effective energy survey will establish which areas will need regular attention and review through good continuing energy management. When planning the timing of energy surveys, take account of any asset condition surveys that are planned as the two can support each other.

How do I analyze the energy value chain data?

Analyze the data by job scope, size of company, and across sectors of the energy value chain, such as: View a list of the participating companies included in the Canada MTCS: Mercer Total Compensation Survey for the

Energy Sector Report here.

How can a data-backed compensation strategy help your energy industry?

Position your organization for the future and spend your energy sector salary budget wisely with a data-backed compensation strategy that helps you secure the people you need across the Canada energy industry.
