What is a roller press machine?

Roller press machine | Compression | Rolling mill | PRODUCTS | YURI ROLL MACHINE CO.,LTD. Pressing machines are used for compression and rolling for not only battery electrode materials but also circuit board material. Machine specification is able to be selected as customer's necessities: a heating type and/or a high pressure type.

Why is roll-to-roll press equipment necessary?

Roll press equipment is necessary to ensure the high density of the electrode material and uniform battery performance. We cater to those needs with our technologies for roll-to-roll press, and for pressing at high linear pressure and with high precision. We have adopted the roll-to-roll method for the equipment.

What is a roll press used for?

Our roll press equipment is used for pressing advanced materials, including materials for secondary battery electrodes. We have been involved in the manufacturing of rolling mills for iron and steel since the 1960s.

Why do roller presses produce micro-cracks?

In addition to boosting plant efficiency and availability, the high operating pressure of the roller press produces micro-cracks in the discharge particles. These micro-cracks are unique to roller press operation and offer reductions in grinding work index and metallurgical benefits to the downstream process.

How does a roller press reduce material loss?

Reduction in the material is accomplished through the comminution principal known as inter-particle breakage. Adequate automation possibilities are inbuilt in the operation logic of the roller press in order to ensure safety, smooth operation, high performance and high availability. What does this mean for

you?
