

## Floor standing battery project financing options in Finland 2026

## Overview

---

The large-scale battery energy storage (BESS) project is located in the Southern Ostrobothnia region of Finland. Construction is expected to start during Q2 2025, with operations of the BESS commencing in 2026.

The large-scale battery energy storage (BESS) project is located in the Southern Ostrobothnia region of Finland. Construction is expected to start during Q2 2025, with operations of the BESS commencing in 2026.

Fu-Gen AG has sold a 50 MW ready-to-build battery energy storage project in Finland to Nala Renewables EY Corporate Finance offers investment banking services through dedicated teams with a focus on M&A. EY Corporate Finance leverages EY's global network of investment banking professionals to.

Swedish flexible assets developer and optimizer Ingrid Capacity has joined hands with SEB Nordic Energy's portfolio company Locus Energy to develop what is claimed to be Finland's largest and one of the Nordics' largest battery energy storage systems (BESS). The 70 MW/140 MWh BESS project will be.

Hundreds of megawatts of new capacity are expected to be commissioned in 2025–2026, significantly impacting reservation prices in the near term. 2027-2030: After 2026, all primary reserve markets are expected to be saturated, shifting BESS operations from FCR-N towards FCR-D, aFRR and mFRR.

Renewable Power Capital (RPC) has signed key construction and supply contracts for their 50 MW battery energy storage system (BESS) facility in Finland. This is RPC's first BESS and is planned to be operating in Summer 2026. Located in Uusikaupunki, Finland, the project will bring 50 MW/100 MWh of.

SEB Nordic Energy's portfolio company Locus Energy, in collaboration with Ingrid Capacity, has announced the start of construction work on Finland's largest battery energy storage system (BESS) in Nivala, North Ostrobothnia. Nivala groundbreaking ceremony. Courtesy of SEB Nordic Energy. When.

Project finance is gaining importance in Finland at the same time as private and international investors become more active in Finnish energy and infrastructure projects. You may meet some confusion when “project financing” is discussed in Finland. Most investment projects in Finland are financed. Where is the largest battery energy storage system in Finland?

SEB Nordic Energy’s portfolio company Locus Energy, in collaboration with Ingrid Capacity, proudly announces the groundbreaking of one of Finland’s largest battery energy storage system (BESS) in Nivala Municipality, Northern Ostrobothnia.

Which energy storage technologies are being commissioned in Finland?

Currently, utility-scale energy storage technologies that have been commissioned in Finland are limited to BESS (lithium-ion batteries) and TES, mainly TTES and Cavern Thermal Energy Storages (CTES) connected to DH systems.

Is energy storage a viable option in Finland?

This study reviews the status and prospects for energy storage activities in Finland. The adequacy of the reserve market products and balancing capacity in the Finnish energy system are also studied and discussed. The review shows that in recent years, there has been a notable increase in the deployment of energy storage solutions.

Are energy storage systems a solution to Finland's energy transition?

Energy storage systems offer a solution. “This groundbreaking is an important moment for Finland’s energy transition and a concrete step toward a more flexible, resilient, and decarbonized energy system,” said Jussi Jyrinsalo, Senior Vice President at Fingrid.

Is energy storage the future of wind power generation in Finland?

Wind power generation is estimated to grow substantially in the future in Finland. Energy storage may provide the flexibility needed in the energy transition. Reserve markets are currently driving the demand for energy storage systems. Legislative changes have improved prospects for some energy storages.

Can PHS be used as energy storage in Finland?

Plans exist for PHS systems, but studies have indicated that there may be few suitable locations for PHS plants in Finland [94, 95]. While large electrolyzer capacities are planned to produce renewable hydrogen, only pilot-scale plans currently exist for their use as energy storage for the energy system (power-to-hydrogen-to-power).
