

Government procurement price of off grid battery system in Canada

**2MW / 5MWh
Customizable**

Overview

The clean energy storage projects secured as part of the latest procurement have an average price per MW of \$672.32.

The clean energy storage projects secured as part of the latest procurement have an average price per MW of \$672.32.

The Ontario Independent Electricity System Operator (IESO) has made Canada's biggest energy storage procurement to date, selecting nearly 1.8GW of projects through a Request for Proposals (RFP). The Canadian province's government announced yesterday (9 May) that it has made its selection of winners.

The Ontario government and Ontario's Independent Electricity System Operator (IESO) announced today that their latest round of procurement secured a total of 2,195 megawatts (MW) of capacity, enough to power the peak demand of 2.2 million homes. This includes 1,784 megawatts (MW) of clean energy.

Ontario's electricity system operator has secured new power supply from 10 battery storage facilities and three natural gas and biogas facilities, which should meet the province's needs until the 2030s. The Independent Electricity System Operator (IESO) had said Ontario should secure 4,000 more.

As part of efforts to adapt and modernize the electrical grid to support renewable energies, battery energy storage systems ("BESSs") are being increasingly incorporated into electrical grids by public utilities and private users. The global BESS market was estimated to be worth US\$7.8 billion in.

Through this competitive procurement process, known as the Long-term 1 Request for Proposals (LT1 RFP), the province looked to procure year-round capacity from new build storage facilities larger than 1 MW. This represented the largest energy storage procurement ever in Canada. A report was tabled.

The Ontario government has announced the completion of the largest battery storage procurement in Canada's history, securing 2,195 megawatts (MW) of

capacity to meet the province's energy needs through 2030. This landmark achievement marks a significant milestone in Ontario's Powering Ontario's.
