to arrest the fall in system frequency. In Singapore, there are two types of reserves: spinning and sustained for an extended time and minutes. Demand Side Participation In the event of imbalances between electricity demand and supply, consumers are able to participate in Demand Side Participation.

Can ESS help Singapore move towards a low-carbon energy system?

In its policy paper, EMA reiterated that ESS "could help Singapore to move

towards a low-carbon and more flexible energy system”. “The EMA will continue to monitor developments in other jurisdictions and see how lessons can be applied to Singapore,” it said.
