The design is compact, allowing overall transportation, easy installation and debugging, and low construction cost; The liquid cooling system ensures higher system efficiency and cell cycling up to 10,000 cycles. The liquid cooling system reduces system energy consumption by 20% and extends battery.

It uses high-density and long-cycle-life lithium iron phosphate batteries for energy storage. The module has an IP66 protection level, liquid cooling, real-time temperature control, and a multi-level Battery Management System (BMS). With a three-level explosion-proof design, it ensures safe and.

PowerTitan Series ST2236UX/ST2752UX, liquid cooling energy storage systems from Sungrow, have longer battery cycle life and multi-level battery protection. How much power does the water cooler consume?

The water cooler consumes 7.6 kW of power to remove energy from the water.

What is EMW series liquid cooling unit for energy storage cabinet?

Product model: EMW75, EMW90, EMW100. EMW series liquid cooling unit for energy storage cabinet makes full use of natural cold sources with an AEER as high as 4.62. Its full frequency conversion control technology innovatively multiplies the energy efficiency.

What is a liquid cooling system?

The integrated frequency conversion liquid cooling system helps limit the temperature difference among cells within 3 °C, which also contributes to its long service life. It has a nominal capacity of 372.7 kWh with a floor space of just 1.69 square meters. The system is suitable for inverters with operating voltages ranging from 600 to 1500 volts.
