

How to upgrade energy storage in world lc2

Overview

What is the energy storage upgrade?

The Energy Storage Upgrade can be used in conjunction with the Overclocker Upgrade to provide machines with more internal power storage when completing operations at a faster rate. Overclocker Upgrades cause machines to use more power per cycle, thus drawing power from their internal storage faster than the maximum input can keep up.

How many IC2 power storage units are there?

There are four power storage units from IC2; the most basic being the BatBox, then the CESU, followed by the MFE, and finally, the grand daddy MFSU. The BatBox can store up to 40,000 EU at one time. It outputs and inputs at 32 EU/t, or Low Voltage, which is effective for the basic IC2 machines. The second tier of storage is the CESU.

How do I overclock a GregTech IC2 machine?

Gregtech machines have slightly different principles to normal ic2 machines in terms of overclocking. You can place an overclocker in a machine by simply having it in your hand, and right clicking on the machine with them.

What resources does IC2 add?

IC2 adds 5 new resources for players to find within their world: Rubber, Copper, Tin, Lead, and Uranium.

What is an overclocker upgrade?

Pulled from industrial craft wiki. An overclocker upgrade can be used to speed up machines at the cost of higher energy consumption. Place one or more overclocker upgrades into the four right-most slots to upgrade a machine. Each upgrade reduces the operating time to 70% of the previous value and increases energy consumption by 60%.

Can I overclock a GregTech LV machine?

Extreme care must therefore be taken when overclocking gregtech machines, as it is very easy to surpass the maximum EU input per tick (i.e. a LV machine requiring 64 EU/t). Transformer Upgrades can of course be applied to these machines in order to make them work.
