

## Italian energy storage standards

## Overview

---

Does Italy need electricity storage?

As Italy's energy mix is increasingly composed of variable renewable energy sources, electricity storage will be needed to integrate power generated by renewables into the national grid and make it available when sun and wind energy are not accessible.

Are battery energy storage systems needed in Italy?

Therefore, battery energy storage systems (BESS) are needed in Italy. The Italian market for BESS is growing rapidly and currently amounts to 2.3 GW but it almost exclusively consists of residential scale systems, associated with small scale solar plants, having a capacity of less than 20 kWh.

Does Italy need a storage system?

Italy's growing need for storage systems is particularly evident in Central and Southern Italy, where a number of renewable energy plants have been installed.

Which energy storage systems are most common in Italy?

According to the report for year 2023 published by Terna (the Italian TSO), most Italian energy storage facilities have been built in connection with small-scale solar power plants, while medium to large-scale storage systems are less common.

Is there a need for energy storage solutions in Italy?

Local industry contacts, as well as U.S. sector firms, have also indicated to Post that there is a need for energy storage solutions in Italy.

What role do energy storage systems play in Italy's decarbonisation & energy security?

Energy storage systems play a crucial role in Italy's decarbonisation and energy security. On 21 January 2020, the Ministry of Economic Development published the Integrated National Energy and Climate Plan, setting targets for energy efficiency, development of renewable sources, and CO2 emissions reduction.
