

Long term savings with residential solar battery installation 2026

Overview

Similar to solar panels, batteries must be installed by January 1, 2026 to claim the 30% federal tax credit. Given grid stability concerns and the limited time window, installing a battery now alongside your solar panel system makes more financial sense than waiting. How much does a solar panel cost in 2026?

Homeowners have until January 1, 2026 to claim the 30% federal tax credit—a benefit that can shave thousands of dollars off your solar investment. The average solar panel system costs around \$28,000, or about \$2.50 per watt, according to EnergySage's latest Marketplace Report.

Are solar panels a tax credit for 2025?

A July 2025 report published by the Department of Energy predicts 100 times more power outages by 2030 compared to today. Similar to solar panels, batteries must be installed by January 1, 2026 to claim the 30% federal tax credit.

What is the new solar tax credit?

This legislation brings significant changes to the federal tax credit for residential and commercial solar and battery systems. Under this new law, homeowners who purchase their systems with cash or a loan will no longer be eligible for the 30% federal tax credit after December 31, 2025. Previously, this solar tax credit was available through 2034.

Are batteries required to claim the solar tax credit?

No, batteries are not required to claim the solar tax credit. You can still receive the 30% credit on a solar-only system. However, if you install qualifying battery storage (at least 3 kWh capacity), it can also be included in the credit—if installed and purchased by December 31, 2025 for homeowner-owned systems.

Will solar be a smart investment without the federal tax credit?

For many homeowners, this represents four extra years of free electricity: Losing the 30% federal credit means systems that previously paid for themselves in 8-10 years may now take 15-20 years to break even. But, even without the federal tax credit, solar will remain a smart investment for many homeowners.

Do solar panels qualify for a 30% tax credit?

Yes, batteries installed with your solar panel system in 2025 qualify for the full 30% tax credit. Batteries make sense if you don't have favorable net metering rates, frequently experience power outages, or have access to programs like virtual power plants that can pay you for stored energy.
