Nickel demand is skyrocketing due to its use in lithium nickel manganese cobalt oxide (Li-NMC) batteries for EVs. Despite substantial investments in new mining operations, particularly in Southeast Asia, supply will need to grow further. Today, about 65% of class 1 nickel—a high-purity type.

Lithium-ion (Li-ion) EV battery prices have decreased dramatically over the past few years, mainly due to the fall in prices of critical battery metals: Lithium, cobalt and nickel. For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024.

Despite the decreasing role of cobalt in battery technology, McKinsey forecasts a 7.5% annual rise in cobalt demand until 2030. The volatility in cobalt prices and ethical sourcing concerns are driving the industry towards greater transparency and sustainability in cobalt procurement. Although.

Nickel demand is climbing sharply due to its role in lithium nickel manganese cobalt oxide (Li-NMC) batteries. Class 1 nickel, a high-purity form critical for batteries, currently sees around 65% of its production directed towards stainless steel. By 2030, competition between battery and steel.

Demand for battery-grade nickel is expected to surge, tripling by 2030, according to Benchmark Mineral Intelligence. This growth will largely be due to mid- and high-performance electric vehicles (EVs) in Western markets. A senior nickel analyst at Benchmark, Jorge Uzcategui, particularly noted.

gthening the energy security in Norway and Europe. To illustrate this, estimates show that switching from a traditional ICE car to an electric vehicle

can reduce CO2 emissions by 60% in 2030 if the battery is produced in a country with a predominantly renewable energy mix. Hence, Norway has the. What is nickel manganese cobalt (NMC) battery market?
