## Overview

---

What are energy storage courses?

Courses cover the energy storage landscape (trends, types and applications), essential elements (components, sizing), technical and project risks, and the energy storage market. Additionally, we can provide combined courses covering wind, solar and/or grid-connection as well.

Where should energy storage systems be located?

Energy storage systems and associated equipment shall be located from the edge of the roof a distance equal to at least the height of the system, equipment, or component but not less than 5 feet (1.5 m). 4.

Will energy storage systems help New York build a self-sustaining industry?

Over \$350 million in New York State incentives have been authorized to accelerate the adoption of energy storage systems in effort of building a self-sustaining industry. Energy storage systems will serve many critical roles to enable New York's clean energy future.

Where should energy storage systems be protected?

Rooms and areas containing energy storage systems shall be protected on the system side as follows: 1. In dedicated use buildings, fire-resistance rated assemblies shall be provided between rooms and areas containing energy storage systems and areas in which administrative and support personnel are located.

Can energy storage systems be located in the same room?

Rooms and other indoor areas containing energy storage systems shall be separated from other areas of the building in accordance with Section 1206.14.4 and Chapter 7 of this code. Energy storage systems shall be permitted to be in the same room as the equipment they support. 1206.11.4 Seismic and structural design.

How far should energy storage be from fire service access point?

The energy storage system shall be the minimum of 10 feet from the fire service access point on the roof top. 7. Energy storage systems shall not be located within 50 feet (15,240 mm) of air inlets for building HVAC systems.
