

Shouhang energy storage inverter user manual

Overview

What is included in the energy storage converter manual?

This manual mainly introduces the safety precautions, product introduction, installation, electrical connections, power-on commissioning, maintenance and technical indicators of the following energy storage converter models. This manual is designed to help you understand and use the product correctly.

What is a single energy storage converter system?

A single energy storage converter system consists of DC fuses, DC disconnectors, DC surge protection devices, DC/AC inverter modules, AC filters, AC circuit breakers, AC surge protection devices and other components. The negative fuse for non-UL models is optional. If you need it, please contact Sineng in advance.

How many inverters can a shrt backup output power supply support?

Detail refer to SHRT backup output power document. 6. Germany is available for 2 inverters parallel in maximum if no ripple control is used in system. 7. These values are only applicable in Australia. 11.2 The Compatibility for Backup under Off-grid Scenario.

How much power should a backup inverter have?

The Backup loads of each inverter should not exceed its nominal power. Refer to 6.7.3 RS485 Connection for the cable connection. In an on-grid parallel system, the master inverter collects information from Smart Energy Meter and slave inverter and performs the energy management including: • Feed-in power control.

How to install an energy storage converter?

Mark the mounting holes according to the base dimensions. Step 2 Place the energy storage converter in the installation location and secure it with bolts or welding. Before wiring the energy storage converter, check and confirm that

all connection cables of the equipment have no dangerous voltage.

How to store an inverter?

Proper storage is required if the inverter is not installed immediately. • Store the inverter in the original packing case with the desiccant inside. • In case of stacking storage, the number of stacking layers should never exceed the limit marked on the outer side of the packing case. • The packing case should be upright.
