

Sodium ion battery storage cost breakdown in Indonesia 2030

Overview

Wider deployment and the commercialisation of new battery storage technologies has led to rapid cost reductions, notably for lithium-ion batteries, but also for high-temperature sodium-sulphur (“NAS”) and so-called “flow” batteries.

Wider deployment and the commercialisation of new battery storage technologies has led to rapid cost reductions, notably for lithium-ion batteries, but also for high-temperature sodium-sulphur (“NAS”) and so-called “flow” batteries.

By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials. The Executive Summary is available in English and Japanese (日本語). Battery.

The battery market in Indonesia is expected to reach a projected revenue of US\$ 4,349.0 million by 2030. A compound annual growth rate of 23.7% is expected of Indonesia battery market from 2024 to 2030. The Indonesia battery market generated a revenue of USD 980.4 million in 2023 and is expected to.

Indonesia Sodium-ion Battery Market is gaining traction as an emerging alternative to lithium-ion batteries, offering benefits of cost-effectiveness, abundant raw materials, and improved safety profiles. Ongoing innovations in cathode and anode materials are enhancing the energy density and cycle.

This is reflected in R&D&I measures on new, less CRM-dependent battery technologies like sodium-ion batteries, which see increasing focus in Europe and are already regarded as a technology with high commercial relevance in big economies such as China and India⁸, or fluoride and zinc-anode.

The Indonesia sodium-ion battery market is reaching a valuation of USD 3 billion in 2023, reflecting a growing interest in alternative battery technologies due to the limitations and environmental concerns associated with lithium-ion batteries. Key players in this market include companies such as.

The energy storage sodium ion battery market is projected to grow from USD 307.4 million in 2025 to USD 2,932.0 million by 2035, at a CAGR of 25.3%. Sodium sulfur battery will dominate with a 48.0% market share, while aqueous will lead the technology segment with a 65.0% share. The energy storage. Will lithium ion battery cost a kilowatt-hour in 2030?

Lithium-ion battery costs for stationary applications could fall to below USD 200 per kilowatt-hour by 2030 for installed systems. Battery storage in stationary applications looks set to grow from only 2 gigawatts (GW) worldwide in 2017 to around 175 GW, rivalling pumped-hydro storage, projected to reach 235 GW in 2030.

How can Bess help the EV market in Indonesia?

The growing EV market will necessitate a robust battery ecosystem, including storage solutions for grid integration and charging infrastructure. Indonesia's focus on industrial growth creates a demand for reliable power. BESS can offer backup power, improve power quality, and enable cost savings through peak shaving.

What will the future of battery technology look like in 2030?

By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials. Battery lifetimes and performance will also keep improving, helping to reduce the cost of services delivered.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.
