

## Successful bid price of rooftop solar battery project in Spain 2026

## Overview

---

Battery energy storage systems are rising in Spain's rooftop solar market, with C&I demand growing despite an overall dip in installation volumes.

Battery energy storage systems are rising in Spain's rooftop solar market, with C&I demand growing despite an overall dip in installation volumes.

While total battery capacity installed alongside rooftop solar fell by 34% in 2024 to 327 MWh, a different trend is quietly reshaping the country's energy landscape: 26% of newly connected rooftop PV systems now come with battery storage. This figure — representing 110 MWh of capacity — may not.

The Spanish government recently greenlit nearly 300 renewable energy projects representing a €17 billion investment and 28 gigawatts of new capacity. The pipeline looks equally promising, with upcoming tenders expected to allocate 10 GW of solar photovoltaic capacity by the end of this year and.

The Spanish government has taken significant steps to promote self-consumption of solar energy, including the approval of a road map with over thirty measures aimed at facilitating its deployment and eliminating barriers. However, targets for installed capacity were initially deemed insufficient.

The Spain rooftop solar market is witnessing significant growth and is poised to experience substantial expansion in the coming years. Rooftop solar refers to the installation of solar panels on the roofs of residential, commercial, and industrial buildings to generate clean and renewable energy.

On 24 June, Royal Decree Law 23/2020 of 23 June, approving measures on energy and other areas for the economic relaunch ("RDL 23/2020") amongst others for the promotion of the renewable's projects and also for the new auction rules entered into forced. For this implementation, and with regard to.

While total battery capacity installed alongside rooftop solar fell by 34% in 2024 to 327 MWh, a different trend is quietly reshaping the country's energy landscape: 26% of newly connected rooftop PV systems now come with

battery storage. This figure — representing 110 MWh of capacity — may not. Why did Spanish households fewer rooftop solar power systems in the first quarter?

REUTERS/Borja Suarez/File Photo Purchase Licensing Rights MADRID, May 28 (Reuters) - Spanish households and firms installed fewer rooftop solar power systems in the first quarter of the year, extending a trend sparked by lower energy prices, inflation and the fading impact of subsidies and casting a cloud on the outlook for the year.

How does Spain promote self-consumption of solar energy?

Promotion of Self-Consumption: The Spanish government has taken significant steps to promote self-consumption of solar energy, including the approval of a road map with over thirty measures aimed at facilitating its deployment.

How far is a rooftop solar system from a building?

In 2022, the Government increased the distance to 2 km for rooftop solar, after receiving strong criticisms for the 500m limit. It also approved a modification of the Horizontal Property Law that simplified the required majority for approval of solar PV installations in buildings.
