

Successful bid price of sodium ion battery storage project in Luxembourg 2025

Overview

Can sodium-ion batteries compete with low-cost Li-ion batteries?

Sodium-ion batteries are considered a promising substitute for Li-ion, but the timeline and conditions for achieving cost-competitiveness remain uncertain. This study evaluates their techno-economic potential, showing that while challenging, they could compete with low-cost Li-ion batteries by the 2030s under specific conditions.

Are sodium-ion batteries a viable alternative to lithium-based batteries?

Sodium-ion batteries offer a promising solution due to their cost-effectiveness, sustainability, and lower environmental impact. However, to rival lithium-based technologies, significant advancements are required in performance, safety, and scalability.

Can sodium-ion energy density improve competitiveness against low-cost lithium ion variants?

Our modelled outcomes suggest that being price advantageous against low-cost lithium-ion variants in the near term is challenging and increasing sodium-ion energy densities to decrease materials intensity is among the most impactful ways to improve competitiveness.

Which automakers have invested in sodium ion?

Volvo Cars became the first automaker to invest in sodium-ion, joining Altris's Series B round to co-develop Prussian-white packs for stationary storage. HiNa shipped production packs for China's budget Sehol E10X hatchback, proving real-world viability. CATL and Faradion both target that milestone by 2027, erasing the gap with current LFP cells.
