## Overview

What is the global demand for VRFB?

The cumulative global demand of VRFB by 2030 is around 111 GWh, with annual demand of about 27 GWh, or 2.4% of the total required stationary storage capacity for that year — a CAGR of 41% from 2022 to 2030 — according to a World Bank Group report.

Do VRFBs degrade with time?

Unlike lithium-ion, VRFBs don't degrade with time, making them ideal for grid use with longer life cycles, improved safety, and scalability, especially for large-scale grid storage solutions.

What challenges will VRFB face?

However, a significant challenge to such growth expectations for VRFB, is the scaling up of production from the current low levels of mining and refining, as well the high cost and limited manufacturing facilities for redox flow batteries.
